EDUCATION

Bachelor of Arts in Computer Science, Minor in Economics

Rutgers University

Sep 2022 - May 2026

New Brunswick, NJ

SKILLS

Programming Languages Java | Python | C | SQL

Frameworks/Libraries Pandas | BeautifulSoup | Playwright | Scikit-learn | NumPy

Tools & Technologies Git | Linux | Azure | Jupyter Notebook

Concepts Object-Oriented Programming | Data Structures & Algorithms | Machine Learning

Certifications Azure AI Engineer Associate

WORK EXPERIENCE

Dropp Logistics

May 2025 - Sep 2025

WMS Solution Specialist

Dayton, NJ

- Configured and optimized business rules for picking, packing, and replenishment within the Warehouse Management System (WMS), enhancing operational efficiency and accuracy.
- Collaborated with cross-functional technical and operations teams to implement software enhancements that reduced order processing time and lowered inventory management error rates from 0.5% to under 0.045%.
- Implemented workflow automation improvements that increased order fulfillment speed and improved warehouse productivity across picking and packing operations.
- Analyzed system performance and user feedback to continuously refine WMS configurations, resulting in a more streamlined and scalable supply chain operation.

Dropp Logistics

May 2024 - Sep 2024

Supply Chain Intern

Dayton, NJ

- Developed, tested, and deployed supply chain software solutions aligned with business and operational requirements.
- Built KPI-driven SQL dashboards and reporting tools to monitor warehouse productivity and operational performance metrics.
- Improved workflow efficiency through automation and data-driven optimization strategies, increasing operational productivity by over 30%.
- Collaborated with technical and business stakeholders to troubleshoot system bottlenecks and improve application performance.

PROJECTS

NBA Match Predictor

Nov 2024 - Dec 2024

Python, Pandas, BeautifulSoup, Playwright, Scikit-learn

- Developed a Python machine learning pipeline using Scikit-learn to analyze 10+ years of NBA historical data to predict game outcomes.
- Engineered web-scraping workflows using Playwright and BeautifulSoup to collect and process thousands of structured data points.
- Developed scalable data-cleaning and feature engineering pipelines using Pandas to improve data quality and model performance.
- Implemented Ridge Classifier models and iterative optimization techniques, improving prediction accuracy by over 10% above baseline.

Inventory Management System for High-Value Goods

May 2025 - Sep 2025

SQL, Azure

- Developed and optimized inventory tracking workflows for a scalable platform supporting real-time visibility into \$2–3 million in high-value goods.
- Optimized backend database workflows to improve system performance, scalability, and real-time inventory visibility.
- Integrated Azure-hosted cloud infrastructure to support secure, scalable, and high-availability inventory management functionality.
- Implemented workflow automation and operational enhancements that reduced labor costs by 15% and minimized inventory shrinkage from 0.10% to under 0.025%.
